 - Good points to know before porting your numbers
- 9 What are the benefits of VoIP for any business, not just those in the SME market?**
- 10 Conclusion**

Conclusion

VoIP is the solution that business is now looking to, to provide the communications infrastructure for the 21st century. Traditional communications platforms still have a place but they are becoming less relevant in today's markets.

If VoIP/hosted telephony is not the solution you move to immediately it should be one your horizon. Your business should analyse what the demands will be upon it both now and in the near future.

Once you have understood your needs, then chances are that VoIP/hosted telephony will give the best return on investment both in terms of infrastructure but more importantly efficiency and longevity.
